# Welcome, to the future of modular home extensions

Brick and mortar extensions have evolved – why not extend your home the modern way with a highly flexible modular wall system with an expansive range of roof options, windows and doors to suit your own unique requirements?

If you are considering a new home extension then why not consider the hup! system from Window Wise, providing a stylish, well-insulated glazed living space to be used throughout the year.

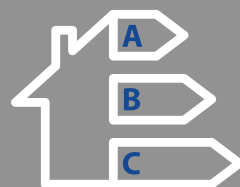

Glazing can be incorporated to both the walls and to the roof of your chosen design, allowing natural light just where you need it.

Create your dream living space that is bright and airy along with your own unique balance of useable wall space and panoramic views.

## why?

There are numerous reasons why Window Wise sees a hup! modular extension as being the ultimate home improvement.

hup! really is the better way to build, offering the very best in aesthetics, energy efficiency, choice, and accreditations. Not only this, but a hup! build is five times faster than a traditional construction!

### Five times more energy efficient

Rising energy costs are a headache for us all, but hup! conservatories & extensions from Window Wise offer ultimate energy efficiency thanks to high performance glass, modular walls with extremely low U-Values and controlled use of solar energy.

### One supplier, one project!

Providing complete project management, Window Wise will take care of everything! A traditional brick built extension requires a whole range of tradesmen to complete. The team at Window Wise are able to take your hup! home improvement from the initial design through to the drawing and planning process, on to construction and completion.

# how?

A Window Wise hup! modular extension to maximise your exciting new living space! The high-tech insulation makes for a new living space to be used throughout the year - a dining area, a new study, a living room for family get togethers, or even a bright and airy play area for children.

It really is as simple as 1, 2, 3...

## one

### windows & doors

Begin your design by deciding where you would like windows and doors, thinking carefully about where you would like access to the garden as well as the amount of light these will bring into your space. Choose from French, sliding or bi-fold doors and windows in any style.

## two

### roof

Choose a solid roof for maximum shade and privacy or add skylights and lanterns, for natural light where you want it creating a stunning focal point. For maximum daylight choose a fully glazed roof or gain some partial shade with a hybrid roof.

## three

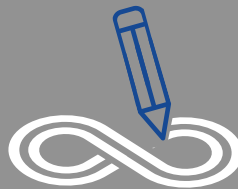

### finish

We offer a range of exciting external finishes to ensure your hup! looks exactly as you wish! Choose from a range of brickwork designs, textured renders or contemporary cedar cladding. The external finish can blend your new extension into your home or go for a contrasting finish, the choice is yours.

### Quick and efficient

hup! extensions from Window Wise are highly efficient to construct, requiring far less materials and fewer 'trade skills' such as bricklayers. The modular hup! walls are pre-cut prior to delivery for a fast build and less mess on site.

### Ultimate design flexibility

Choose from pitched roofs or flat roofs, solid or glazed and place walls wherever you like in your design. Whether you want to frame your view with large picture windows or create an indoor/outdoor space with large sliding doors, the hup! system from Window Wise gives you total design freedom.

### High quality finish, every time

A high quality finish is assured every time. Designed and manufactured in a BBA approved UK factory – every hup! extension features modular material technology that is patented and approved by the BBA to a lifespan of at least 60 years.

# Three ways to extend your home with hup!

## Build a new conservatory

Using the hup! modular system, we can offer the very latest in conservatory design and technology. With far more design options than conservatories of old, modern conservatories are stunning light filled spaces that are also a room for all seasons. This is thanks to high performance glass and the technology with the hup! walls and all of our roof choices.

## Transform your existing conservatory

If you have ambitions for your old conservatory, then our hup! walls offer a simple solution. We can transform an old conservatory into a modern, energy efficient extension that feels like it is a true part of your home. The lightweight, energy efficient walls are quick, easy, and cost effective to build onto existing bases.

## Extending your home

Are you dreaming of a bright sociable open plan room that links your living space with the garden? The hup! system used by Window Wise offers endless design possibilities for your ideal extension.

Extension

# hup! technology explained

The walls in any Window Wise modular hup! extension use advanced Ultrapanel® technology.

## Rapid connection details

Millimetre precision engineering and patented wall and roof design will ensure a perfect build with no cold spots.

## Patented Ultrapanel® technology

The composite, insulated panel technology combines the best of both timber and steel framing building technology with exceptional insulation properties. With U-Values of between 0.14 and 0.17 that significantly exceed Building Regulation requirements, a hup! extension from Window Wise is five times more energy efficient than the average UK home.

## Finishes

Walls are compatible with any wall finish providing you with unlimited design flexibility.

For a more traditional build appearance you could use a traditional brick finish, or for a more contemporary finish choose timber or render.

Planked cedar

Woodgrain

Textured render

Some of the UK's most popular brick styles

# The importance of glass

**We use high-performance/ energy-efficient glass for very good reasons.**

The type of glazing we use within our homes is now more important than ever, at the very least, allowing natural light in whilst keeping the inclement weather and cold out.

The addition of a second pane of glass gives us the double-glazing which we've become accustomed to over the past 40 years. Two panes of glass help insulate your home by reducing heat loss from indoors. This same insulation also reduces the penetration of cold from outside.

In more recent years, the glass industry has introduced special coatings that reflect even more heat back indoors whilst filtering the more damaging ultra-violet rays and regulating infra-red rays so as to warm your home but not over-heat it.

Roof glass can utilise this technology with the addition of coloured tints to reduce any unwanted glare and due to its skyward position, reduce even more of the effects of solar over-heating as well as protecting furniture from fading.

Using the correct glass type is part of the intelligent design process we use at Window Wise to ensure long-term benefit, comfort and enjoyment from your hup! modular extension.

You would expect nothing less from Window Wise!
